

Nature's Sunshine manufactures and distributes nutritional & personal care products worldwide.

# CASE STUDY

## Lift & Reshape Workloads to OCI

Complex cloud migration done in the shortest possible time

### CUSTOMER INFORMATION

Founded in 1972, Nature's Sunshine Products "NSP", is a Utah based manufacturer & marketer of dietary supplements/ personal care products.

### CUSTOMER CHALLENGE

NSP is currently hosted on-prem and looking for ways to optimize costs, enhance security, actualize greater operational efficiency, and reduce TCO at the same time.

### VIGILANT's SOLUTION

Vigilant has implemented a solution that is more flexible, more reliable, higher performance, and lower cost than either on-premises or other cloud approaches. The offering considers real production needs such as security, network configuration, increased accessibility, disaster recovery, identity integration, and cost management.

### CUSTOMER ENVIRONMENT

- Oracle EBS
- Oracle ASCP (Advanced Supply Chain Planning)
- Oracle Business Intelligence (OBIEE)
- Oracle Agile
- Oracle Demantra

## PROJECT DETAILS

Vigilant supported NSP in handling the complex lift-and-reshape migration process in the shortest possible time and ensures that several TB of data are fully transferred between the on-premise data center and the Oracle Cloud Infrastructure (OCI). Vigilant has replicated some of the non-cloneable Oracle environments w/o the need for reinstallation/configurations or major testing.

## KEY BENEFITS

The reasons why NSP chose to move its infrastructure to the cloud are the significantly improved scalability of the environments with all related services, such as Oracle EBS, ASCP, SOA, Agile, Demantra and Business Intelligence, with a total of eighteen different Oracle Environments, which enables the customer to use and pay for services only when they are actually needed.

An important financial aspect is the reduction of the Total Cost of Ownership (TCO) for NSP. Using Oracle IaaS services, NSP was able to eliminate the need to refresh Data center EOL hardware, day-to-day maintenance costs, the TCO can be reduced by 30 percent. Furthermore, it is very important for the customer to secure the added value of such a powerful application for the next few years.

## BUSINESS IMPACT

- **High-Performance needs covered**
- **Improved Operational Efficiency**
- **Reduced overall risk & testing times**

- **Enhanced Security & Compliance**
- **Better Hybrid Cloud Configuration Support**

- **Cost Savings**
